Two Year Post Graduate Course Semester I

BOTANY

DCC

**Biology and Diversity of Plants
(Microbes, Algae and Fungi)**

Unit-I

- Archaebacteria and Eubacteria: General characters, distribution, ultra-structure, nutrition, multiplication, biology, economic and evolutionary importance. Methods of genetic recombination and their significance.
- Viruses: Physical and chemical characteristics, ultra-structure, multiplication, Plant virus transmission. Mycoplasma, phytoplasma, viroids, rickettsias, sprioplasma and prions: A general account.

Unit-II

- Algae: General account, thallus organisation, cell structure, reproduction, life cycle pattern, classification schemes. Salient features of Cyanophyta, Chlorophyta Charophyta, Xanthophyta, Bacillariophyta, Phaeophyta and Rhodophyta. Salient features of Prochlorophyceae, Glaucohyceae, Eustigmatophyceae.
- Fungi: General characters, ultra-structure, cell wall composition, nutrition (necrotrophs, biotrophs and symbionts), methods of reproduction. Recent trends in classification and phylogenetic relationship among fungal groups.

✓

Govind Guru Tribal University
Banswara (Rajasthan)

Unit- III

- Fungi: General account of morphology, reproduction, life cycle and economic importance of Mastigomycotina, Zygomycotina, Ascomycotina, Basidiomycotina and Fungi imperfecti. Economic importance of fungi.
- Fungal associations: Mycorrhizae and Lichens; General account of morphology, reproduction, life cycle and significance.

Biology and Diversity of Archegoniate

Unit-I

- Bryophytes: Origin of Bryophytes. General characters and classification. Comparative study of structure, reproduction and life cycle of Hepatocotsida, Anthocerotopsida and Bryopsida.
- Bryophytes: General characters, structure, reproduction, interrelationships of Bryophytes with special reference, *Asterella, Notothylas*.

Unit-II

- Pteridophyta: General account, distribution with special reference to India. Study of the structure, reproduction, evolution, classification and inter-relationships of the Pteridophyta with special reference to Rhyniophytopsida, Psilotopsida, Lycopsida, Sphenopsida, Pteropsida. Evolution of stelar system soral evolution; Heterospory and seed habit, Telome theory.
- Palaeobotany: Geological time scale, types and nomenclature of fossils, fossilization,

Unit-III

*Rajendra Prasad Agarwal
Registrar
Govind Guru Tribal University
Banswara (Rajasthan)*

- Gymnosperms: General account of present and past distribution of gymnosperms with special reference to India. Economic importance of gymnosperms, phylogeny and relationships of the main groups of gymnosperms.
- Gymnosperms: Study of structure, reproduction, evolution, classification, life history with special reference to Cycadopsida, Coniferopsida, Gnetopsida. Evolution of the female strobilus in Coniferales.

Cell Biology and Biochemistry

Unit-I

- Cell: Types, Signal hypothesis, protein sorting to mitochondria and chloroplasts. Structure and functions of: cellular membranes, cell wall and cell organelles (nucleus, mitochondria, chloroplasts, Golgi apparatus, lysosomes, endoplasmic reticulum, vacuoles, ribosomes, and cytoskeleton). Cell division: mitosis and meiosis.
- Chromosomes: Structure of chromatin and chromosomes, unique and repetitive DNA, heterochromatin, euchromatin, Nucleosome structure, DNA scaffolds and loops. Types, Structural and numerical alterations in chromosomes: duplication, deficiency, inversion, translocation heterozygotes, Haploids, aneuploids and euploids; C-value and C-value paradox, Cot curve and its significance.

Unit-II

- Bioenergetics: Principles of the thermodynamics, Gibb's free energy and chemical potential, redox potential. structure and functions of Energy carriers (ATP, GTP, NADP, FADH) Fats and Lipids: Fatty acids and fatty oils, Structure and function of lipids, classification of lipids, fatty acids and their biosynthesis.
- Carbohydrates: Classification, structure, properties.. Enzymes: General characters, nomenclature and classification, Mode of enzyme action, Michaelis Menton equation and its significance. Regulation of enzymes, allosteric modulation, enzyme inhibition, coenzymes, isoenzymes, abzymes. Factors effecting enzyme activity.

JD
Rajendra Prasad Agarwal
Registrar
Govind Guru Tribal University
Banswara (Rajasthan)

Unit-III

- Amino acids: Structure, Types, Properties, Stereo-isomers, Functions, Amino Acids as Precursors of Biomolecules. General Biosynthetic pathways of amino acids: Reductive amination and transamination, GS-GOGAT pathway.
- Protein- types , properties, structure , function, reverse turn and Ramchandran plot

Suggested Reading :

DSE / GE

Plant Ecology and Biodiversity Conservation

Unit-I

- Ecosystem: Ecosystem structure and function, Ecosystem stability, concept of resistance and resilience, Ecological energetic; energy flow through ecosystem. Global biogeochemical cycles of C, N, P and S, Principles of limiting factor.
- Community: biological and physical structure, organismal and individualistic model of community. Edges and ecotones. Succession; Concept, models and mechanisms. concept of niche, species coexistence.

Unit-II

- Pollution: Environmental pollutions, global environmental changes; green house gases, consequences of climate change, carbon foot print, carbon credits, carbon squestration, , Sustainability; global carrying capacity, phytoremediation, plant indicator.
- Phytogeography: Major biomes of the world with special reference to desert and grassland.

Unit-III

- Population: Properties of populations; birth rate, death rate, survivorship curves, population growth, Logistic model, carrying capacity, population pyramids, r- and k-

*Rajendra Prasad Agarwal
Registrar
Govind Guru Tribal University
Banswara (Rajasthan)*

- strategies, intraspecific population regulation, interspecific competition; Lotka-Volterra model, type of interactions, Concept of Population Genetics (Hardy-Weinberg principle)
- Plant biodiversity: concept, type and measurement of biodiversity. IUCN categories of threat. Hot spot. Strategies for conservation- *In situ* and *Ex situ*

Suggested Reading :

- Aery, N.C. 2010. Manual of Environmental Analysis, Ane Books Pvt. Ltd., New Delhi.
- Kormondy, E.J. 1996. Concepts of Ecology. Prentice Hall India Pvt.Ltd., New Delhi.

GOVIND GURU TRIBAL UNIVERSITY BANSWARA **M.Sc.**

Two Year Post Graduate Course **Semester I** **BOTANY** **DSE / GE** **Genetics and Evolution**

Unit-I

- Mendelism: Concept of gene, Mendel and his laws. Applications of laws and probability tests, Chi-square test and its application in the analysis of genetic data. Pattern of inheritance in haploid and diploid organisms. Extension of Mendelism: basis of dominant and recessive inheritance, Multiple alleles and allelic series, pseudoallele, complementation tests, lethal alleles, penetrance and expressivity.
- Chromosomal basis of inheritance: Sex determination; Sex linked, sex influenced and sex-limited traits; genetic marker, Linkage and crossing over, Linkage analysis and linkage map.

Unit-II

- Extra chromosomal inheritance: Maternal inheritance, Extra-nuclear inheritance in Paramecium, Yeast, Mitochondrial Genomes, Chloroplast genomes, Cytoplasmic male sterility. Somatic cell genetics: Cell-cell hybridization, cell hybrids. Genetic recombination: Recombination and genetic mapping, Homologous and non-homologous recombination, site-specific recombination. Molecular markers and mapping. Physical mapping of genes.

*Rajendra Prasad Agarwal
Registrar
Govind Guru Tribal University
Banswara (Rajasthan)*

Unit-III

- Pedigree: Pedigree analysis, lode score for linkage testing, karyotypes, genetic disorders.
- Quantitative genetics: Polygenic inheritance, heritability and its measurements
- Mutations: Spontaneous and induced mutations, physical and chemical mutagens. molecular basis of gene mutations, transposable elements in eukaryotes and prokaryotes.
- Evolution: Emergence of evolutionary thoughts: Lamarck; Darwin-concepts of variation, adaptation, struggle, fitness and natural selection; Origin of basic biological molecules; abiotic synthesis of organic monomers and polymers; concept of Oparin and Haldane; experiment of Miller, the first cell: origin and evolution in prokaryotes and eukaryotes.

Suggested Reading :

Two Year Post Graduate Course Semester II

BOTANY

DCC

Fundamentals of Molecular Biology

Unit-I

- Cell Cycle and DNA: Cell cycle regulation, role of cyclins and cyclin-dependent kinases. DNA structure and types (A-, B-, Z-, DNA). DNA replication, enzymes of DNA replication, DNA repair mechanisms.
- RNA: RNA synthesis and processing: Transcription factors and machinery, RNA polymerases, transcription initiation, elongation and termination, RNA processing: RNA editing, capping, polyadenylation, splicing.

Unit-II

- Protein: Protein synthesis and processing: Genetic code, Ribosome, Translation: formation of initiation complex, initiation factors and their regulation, elongation and elongation factors, termination, translational proof-reading, translational inhibitors, post-translational modification of proteins.
- Gene regulation: Regulation of gene expression in pro- and eukaryotes, the control sequences (operator, promoter, terminator, attenuator, enhancer), Operon model - lac, trp. operon, attenuation, role of chromatin in regulating gene expression and gene silencing.

48
Rajendra Prasad Agarwal
Registrar
Govind Guru Tribal University
Banswara (Rajasthan)

Unit-III

- Genomics and Proteomics: Introduction to Structural, functional genomics and its application to health and agriculture, including gene therapy. Brief account of Proteomics.
- Cancer: Molecular genetics of Cancer: oncogenes, tumor suppressor genes, metastasis,therapeutic interventions of uncontrolled cell growth, apoptosis.

Reference Books:

- J.D. Watson, T.A. Baker, S.P. Bell etc., Molecular Biology of the Gene, Pearson Education, India.
- J.W. Dale and My Schantz, From Genes to Genomes, John Wiley & Sons.

Structural and Reproductive Plant Biology

Unit-I

- Meristems: Introduction, organization of meristems, shoot development- organization of the shoot apical meristems (SAM), wood development in relation to environmental factors. Organization of root apical meristem (RAM). Floral meristems and floral development in Arabidopsis. Tissue and tissue systems; Parenchyma, Collenchyma, Sclerenchyma, Xylem, Phloem, Secretory structures and periderm. Plant anatomy: Primary and secondary structure of root and stem of angiosperms.

Unit-II

- Anomalous secondary growth in stem and roots of angiosperms. Leaf anatomy. Leaf development and phyllotaxy. Flower: Evolution of flower, genetics of floral organ differentiation; foliar stamens; open carpels; primitive living angiosperms.
- Male gametophyte: Structure of anthers, microsporogenesis, role of tapetum, pollen germination, pollen tube growth and guidance, pollen embryos. Female gametophyte: Ovule development and types, placentation types and its evolution. Megasporogenesis

Govind Guru Tribal University
Banswara (Rajasthan)

Unit- III

- Embryo sacs: organization of the embryo sac, types of embryo sacs. Pollination and Fertilization: pollen-pistil interaction; pollination mechanisms and vectors; sporophytic and gametophytic self-incompatibility. Double fertilization, in vitro fertilization.
- Endosperm: Types, ultrastructure, endosperm haustoria, their extension, persistence and function. Embryogenic types, organogenesis of mono and dicot embryos. Polyembryony (types and significance). Apomixis. Seed development and fruit growth.

Suggested Reading :

Plant Growth and Development

Unit-I

- Water relations: Chemical and Water potential. Absorption of water. Ascent of Sap, Transpiration, Factors affecting the rate of transpiration, Physiology of stomatal movement and regulation of transpiration. Guttation. Membrane transport: transport proteins, passive and active mechanisms.
- Plant nutrition: Nutrient requirement of plants. Essential nutrients: macro and micronutrients, Chelating agents, Nutrient deficiency (Symptoms and disorders). Seed: Seed development, germination and dormancy, bud dormancy, Ageing, Senescence and death.

Unit-II

- Plant growth and Regulation: Over view, Historical account, Measurement of growth and growth kinetics. Plant growth regulators: Biosynthesis, chemical nature, physiological effects and mode of action of auxins, gibberellins, cytokinins, ethylene, abscisic acid, brassinosteroids, jasmonic acid and salicylic acid.
- Photomorphogenesis: Over view, Historical account, Photoreceptors: structure, function, properties (Phytochrome and cryptochrome), molecular mechanism of action and role in

Plant Physiology

Unit-I

- Photosynthesis: Historical account, Evolution of photosynthetic apparatus, physiological and ecological significance, Factors effecting photosynthesis. Photo pigments; types, structure, Photosystems; types, structure and function. Photophosphorylation. Photo-protective mechanisms. Carbon assimilation; C₃, C₄ and CAM pathways, Photorespiration and its significance.

Unit-II

- Respiration: Over view, Historical account, Evolution of anaerobic and aerobic metabolism, Aerobic respiration: glycolysis, TCA cycle, Pentose phosphate pathway, Oxidative electron transport and chemiosmotic hypothesis of ATP synthesis, alternative oxidase system, Anaerobic respiration. Fermentation: Alcohol and Lactic acid fermentations.
- Lipid and Nitrogen metabolism: Oxidation of Fatty acids, β -oxidation, Ketone Bodies, ammonium assimilation (reductive amination, GS-GOGAT system, transamination). Biological nitrogen fixation: Non symbiotic and Symbiotic, nitrification and denitrification. Structure of nodule and heterocyst, Role and structure of Nitrogenase, Leghemoglobin, Genetics of Nitrogen fixation.

Plant Systematics and Resources Utilization

Unit- I

- Fundamentals of Systematics: Historical account of development of Taxonomy, Plant nomenclature, Taxonomic structure (concept of taxa, species, genus, family), numerical taxonomy, Botanical gardens, Herbarium, Taxonomic terminology; floral formula and floral diagram. Phylogeny; origin and evolution of angiosperms
- Systems of angiosperm classification broad outline and relative merits and demerits of major systems of classification (Bentham and Hooker, Engler and Prantl; Hutchinson; Takhtajan; Angiosperm Phylogeny Group). Taxonomic evidence - palynology, phytochemistry, molecular systematics.

Unit-II

- Angiosperm families: Diagnostic features of Ranunculaceae, Leguminosae (Subfamily; Papilionoideae, Caesalpinoideae, Mimosoideae), Solanaceae, Asteraceae, Cucurbitaceae, Lamiaceae, Euphorbiaceae, Orchidaceae, Liliaceae, Poaceae. Combretaceae, Loranthaceae, Lemnaceae, Cyperaceae.

GOVIND GURU TRIBAL UNIVERSITY BANSWARA

B.Sc.

Three Year Graduate Course

Semester I

BOTANY

DCC

Biodiversity

(Microbes, Algae, Fungi, Lichen and Mycorrhiza)

Unit1:Microbes

Viruses - Discovery, general structure, replication (general account), DNA virus (T-phage); Lytic and lysogenic cycle, RNA virus (TMV); Viroid and Prion;

Bacteria- Discovery, General characteristics and cell structure; Reproduction vegetative, a sexual and recombination (conjugation, transformation and transduction); Economic importance.

Mycoplasma -General characteristics and cell structure;

Unit2: Algae

General characteristics; Ecology and distribution; Range of thallus organization and reproduction; Classification of algae; Morphology and life-cycles of the following: *Nostoc*, *Chlamydomonas*, *Oedogonium*, *Vaucheria*, *Ectocarpus*, *Polysiphonia*. Economic importance of algae.

Unit3:Fungi

Introduction-General characteristics, ecology and significance, range of all us organization, cell wall composition, nutrition, reproduction and classification; True Fungi

General characteristics, ecology and significance, life cycle of *Rhizopus* (Zygomycota) *Penicillium* (Ascomycota), *Alternaria* (Deuteromycetes) *Puccinia*, *Agaricus* (Basidiomycota); Symbiotic Associations Lichens: General account, reproduction and significance; Mycorrhiza: ectomyorrhiza and endomycorrhiza and their significance

GOVIND GURU TRIBAL UNIVERSITY BANSWARA

B.Sc.

Three Year Graduate Course Semester II BOTANY DCC Plant Ecology

Unit 1: Introduction and Ecological Factors

- Definition, Scope and aims of ecological studies. Levels of organization hierarchy: from population to Biome. Biotic and Abiotic factors affecting plant growth and distribution.

Unit 2: Population and Communities Ecology

- Natality, Mortality, Age and Sex Ration, Growth Rate, Biotic Potential, Deme, Ecotype, Biotype, Plant Community-Concept and Characters (Qualitative and Quantitative), Plant Succession-Processes and types-Hydrosere, Xerosere. Energy Partitioning: r and k selection. Concept of habitat, ecological niche and Guild.

Unit 3: Ecosystem Ecology

- Concept-Structure and Function: food Chain, Food Web, Trophic Level, Ecological Pyramid. Biomass production- primary and secondary productivity. Energy Flow and Biogeochemical Cycles-Phosphorus, Carbon and Nitrogen Cycle
